SecuSUITE® for Samsung Knox – Secure Communication for Governments
Secusmart – Reliable Partner for Governments

German Federal authorities have been relying on Secusmart solutions for many years when it comes to securing their mobile communications. Secusmart solutions reliably encrypt voice and data up to security classification Restricted (RMF) and also enable personal use in the non-classified domain.

Secusmart's Knox for Samsung Knox offers a secure mobile platform on the latest smartphones and tablets of the Samsung Galaxy series, enabling the simultaneous use of business and personal apps, for business apps in particular. In addition to custom applications, the full range of business apps for the Android operating system is available. Secusmart's Knox is fully compatible with the existing Secusmart for BlackBerry® 10 solution and readily integrates with existing infrastructure.
